- **CMOS Compatible Schmitt Trigger Inputs for High Noise Immunity**

description

The TPIC0107B is a PWM control intelligent H-bridge designed specifically for dc motor applications. The device provides forward, reverse, and brake modes of operation. A logic supply voltage of 5 V is internally derived from V_{CC} .

The TPIC0107B has an extremely low $r_{DS(on)}$, 280 m Ω typical, to minimize system power dissipation. The direction control (DIR) and PWM control (PWM) inputs greatly simplify the microcontroller overhead requirement. The PWM input can be driven from a dedicated PWM port while the DIR input is driven as a simple low speed toggle.

The TPIC0107B provides protection against over-voltage, over-current, over-temperature, and cross conduction faults. Fault diagnostics can be obtained by monitoring the STATUS1 and STATUS2 terminals and the two input control lines. STATUS1 is an open-drain output suitable for wired-or connection. STATUS2 is a push-pull output that provides a latched status output. Under-voltage protection ensures that the outputs, OUT1 and OUT2, will be disabled when V_{CC} is less than the under-voltage detection voltage $V_{(UVCC)}$.

The TPIC0107B is designed using TI's LinBiCMOS™ process. LinBiCMOS allows the integration of low power CMOS structures, precision bipolar cells, and low impedance DMOS transistors.

The TPIC0107B is offered in a 20-pin thermally enhanced small-outline package (DWP) and is characterized for operation over the operating case temperature of -40°C to 125°C .

FUNCTION TABLE

DIR	PWM	OUT1	OUT2	MODE
0	0	HS	HS	Brake, both HSDs turned on hard
0	1	HS	LS	Motor turns counter clockwise
1	0	HS	HS	Brake, both HSDs turned on hard
1	1	LS	HS	Motor turns clockwise

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LinBiCMOS is a trademark of Texas Instruments Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

block diagram

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
DIR	3	I	Direction control input
GND	7, 9, 12, 14	I	Power ground
GNDS	1, 10, 11, 20	I	Substrate ground
OUT1	5, 6	O	Half-H output. DMOS output
OUT2	15, 16	O	Half-H output. DMOS output
PWM	8	I	PWM control input
STATUS1	13	O	Status output
STATUS2	18	O	Latched status output
VCC	2, 4, 17, 19	I	Supply voltage

NOTE: It is mandatory that all four ground terminals plus at least one substrate terminal are connected to the system ground. Use all VCC and OUT terminals.

schematics of inputs and outputs

absolute maximum ratings over operating case temperature range (unless otherwise noted)†

Power supply voltage range, V_{CC}	-0.3 V to 33 V
Logic input voltage range, V_{IN}	-0.3 V to 7 V
Load dump (for 400 ms, $T_C = 25^\circ\text{C}$)	40 V
Status output voltage range, $V_{O(\text{status})}$	-0.3 V to 7 V
Continuous power dissipation, $T_C = 25^\circ\text{C}$	1.29 W
Storage temperature range, T_{stg}	-55°C to 150°C
Maximum junction temperature, T_J	150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

DISSIPATION RATING TABLE

$T_A \leq 25^\circ\text{C}$	DERATING FACTOR	$T_A = 70^\circ\text{C}$	$T_A = 125^\circ\text{C}$
POWER RATING	ABOVE $T_A = 25^\circ\text{C}$	POWER RATING	POWER RATING
1.29 W	0.0104 W/°C	0.82 W	0.25 W

recommended operating conditions

PRINCIPLES OF OPERATION

protective functions and diagnostics†

over current/short circuit‡

The TPIC0107B detects shorts to V_{CC} , ground, or across the load being driven, by comparing the V_{DS} voltage drop across the DMOS outputs against the threshold voltage. The DMOS outputs of the TPIC0107B will be disabled and the fault flags will be generated 10 μ s after an over-current or short-circuit fault is detected. This 10 μ s delay is long enough to serve as a de-glitch filter for high current transients, yet short enough to prevent damage to the DMOS outputs. The DMOS outputs remain latched off until either DIR or PWM input is toggled.

In cases where the outputs have a continuous short-to-ground with a current rise time faster than 0.5 A/ μ s, the over-current shutdown threshold will decrease to 3 A to reduce power dissipation. This reduction to 3 A is achieved since the DMOS outputs will not be fully enhanced when the over-current threshold is reached if the current rise time exceeds 0.5 A/ μ s. Over-current and/or short-circuit protection is provided up to $V_{CC} = 16.5$ V and a junction temperature of 90°C.

over temperature

The TPIC0107B disables all DMOS outputs and the fault flags will be set when $T_J \geq 140^\circ\text{C}$ (min.). The DMOS outputs remain latched off until either DIR or PWM input is toggled.

under voltage

The TPIC0107B disables all DMOS outputs when $V_{CC} \leq V_{(UVCC)}$. The outputs will be re-enabled when $V_{CC} \geq V_{(UVCC)}$. No fault flags are set when under-voltage lockout occurs.

over voltage

In order to protect the DMOS outputs from damage caused by excessive supply voltage, the TPIC0107B disables all outputs when $V_{CC} \geq V_{(OVCC)}$. Once $V_{CC} \leq V_{(OVCC)}$, either DIR or PWM input must be toggled to re-enable the DMOS outputs.

cross conduction

Monitoring circuitry for each transistor detects whether the particular transistor is active to prevent the HSD or LSD of the corresponding half H-bridge from conducting.

open circuit

During operation, the bridge current is controlled continuously. If the bridge current is >10 mA (min.) for a period >1 ms (min.), the fault flags are set. However, the output transistors will not be disabled.

† All limits mentioned are typical values unless otherwise noted.

‡ If a short circuit occurs (i.e., the over-current detection circuitry is activated) at a supply voltage higher than 16.5 V and a junction temperature higher than 90°C, damage to the device may occur.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
TPIC0107BDWP	OBSOLETE	SO Power PAD	DWP	20		TBD	Call TI	Call TI
TPIC0107BDWPG4	OBSOLETE	SO Power PAD	DWP	20		TBD	Call TI	Call TI
TPIC0107BDWPRG4	OBSOLETE	SO Power PAD	DWP	20		TBD	Call TI	Call TI

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
